

Personal Trainer Client Tracker

Thanks for your order. Setting it up takes about fifteen minutes. After that, a line for each session, package and check-in keeps everything up to date.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Personal-Trainer-Client-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. With the Google Sheets app you can mark a session from your phone.

Excel: double-click the file.

Setting it up

1. **Settings:** your business name, your units, after how many sessions left a client needs a word, how often you check in, and whether a late cancel uses a session. Name your three performance marks, such as a lift, a count or a time, and whether higher or lower is better.
2. Delete the example studio: its clients, sessions, packages and check-ins are made up. Select the yellow cells and press Delete, rather than deleting whole rows.
3. **Clients:** each client once, with the day they started and their goal.

As you go

- **Packages:** each block of sessions a client buys, with the price and what they have paid so far.
- **Sessions:** book them ahead with the status empty. Afterwards pick Attended, No-show, Late cancel or Cancelled. A no-show always uses a session.
- **Check-ins:** the measurements and marks you take. Leave empty what you did not measure.
- **Report:** pick a client, then print the tab or save it as a PDF to share their progress.

Good to know

- The Dashboard lists the clients who owe money, are running out of sessions, have a package ending, or are due a check-in, and the sessions booked next.
- The file records numbers only. It gives no health or training advice.
- Room for 100 clients, 3,000 sessions, 500 packages and 1,500 check-ins.
