

Social Media Content Planner

Thanks for your order. Setting it up takes about ten minutes: your platforms and your topics. After that, a line for each post, and its numbers once it is out.

Opening the file

Google Sheets: at drive.google.com, click *New > File upload*, pick **Content-Planner.xlsx**, open it and choose *File > Save as Google Sheets*. **Excel:** double-click the file.

Setting it up

1. **Settings:** your platforms, each with a short name for the calendar and how many posts a week you aim for, and your topics.
2. **Stats:** your platforms again, with the followers at the end of each month.
3. Delete the example shop's posts and numbers: they are made up.

As you plan and post

- **Posts:** each post with its date, time, platform, type, topic and a few words on what it is. Move the status along: Idea, Draft, Scheduled, Published. An idea can wait without a date.
- **Results:** once a post is out, its reach, likes, comments, shares and saves. The rate works itself out.
- **Calendar:** the month with the posts of each day, ready to print. Settings shows another month.
- **Dashboard:** the posts coming up, what is late, each platform against its weekly goal, and the best posts of the month.

Good to know

- A post still in Draft or Scheduled after its date shows as Late.
- Rate is likes, comments, shares and saves together, divided by the reach.
- A calendar day shows three posts and how many more there are.
- Room for 800 posts, 8 platforms and 8 topics.
