

Habit and Mood Tracker

Thanks for your order. Setting it up takes five minutes. After that, it takes a few seconds a day.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Habit-Mood-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. With the Google Sheets app you can tick your habits on your phone.

Excel: double-click the file.

Setting it up

1. **Habits:** type the year and up to 15 habits. Keep each habit on the same line all year, so its streak carries on from one month to the next.
2. Clear the example: on each month tab, select the day cells and delete them.

Every day

Open the tab of the month. Type x under the day for each habit you did. In Google Sheets you can use checkboxes instead: select the day cells and choose *Insert > Checkbox*. Then give the day a mood from 1 to 5 (5 great, 4 good, 3 okay, 2 low, 1 bad) and type the hours you slept.

Reading it

Each month tab shows, for every habit, the days done, the share of days so far, the streak you are on and the best streak. A streak counts the days in a row and carries on across months. The streak you are on counts today once it is ticked, and until then the days up to yesterday. The Dashboard shows this month's habits, the year month by month, and your average mood and sleep. Year in pixels colours every day of the year by your mood.

For a new year, make a copy of the file, change the year on the Habits tab and clear the day cells.

A personal tracker only. It does not give medical advice. Made with the help of AI tools.
