

Client and Appointment Tracker

Thanks for your order. Setting it up takes about fifteen minutes, plus the time to type in the clients you want to keep. After that you add one line per booking.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Client-Appointment-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. The Google Sheets app then shows your week and your clients on your phone.

Excel: double-click the file.

Setting it up

1. **Services:** each service with its price and how many minutes it takes. On the right, choose whether a no-show uses a package session, and after how many days a client who has not been back should show up in Follow up.
2. **Clients:** one line per client, with the phone, email, birthday and notes you want to keep.

You only type in the **yellow cells**. Delete the example clients, appointments and packages before you start. Select the yellow cells and press Delete, rather than deleting whole rows.

Every day

1. **Appointments:** one line per booking, with the date, time, client and service. The status starts as Booked. After the visit, set it to Done and type what was paid and how. A discount lowers the price.
2. **Packages:** when a client prepays several sessions, add one line. Their visits are then paid with *Package* and the sessions left go down by one each time.
3. **Dashboard and Week:** what is coming up, what you earned this month and this year, who owes you money, whose package is almost used, who has not been back, and whose birthday is this month.

A booking whose date has passed but is still Booked turns orange, so you remember to update it. The Week tab shows the current week until you type another date.
