

# Debt Payoff Planner

Thanks for your order. Filling it in takes about three minutes, and then you see your debt-free date.

## Opening the file

**Google Sheets:** go to [drive.google.com](https://drive.google.com), click *New > File upload* and pick **Debt-Payoff-Planner.xlsx**. Open it, then choose *File > Save as Google Sheets*.

**Excel:** double-click the file, and click "Enable editing" if Excel asks.

## Setting it up (Debts tab)

1. One line per debt: the current balance, the yearly interest rate (%) and the minimum monthly payment. The example debts are made up. Select the yellow cells and press Delete, rather than deleting whole rows.
2. The extra amount you can pay each month on top of the minimums. Even a small amount moves the date.
3. The month of your first payment.
4. The method: **Avalanche** pays the least interest, **Snowball** clears the smallest debts first.

## Each month

The Dashboard says what to pay: the minimum on every debt, and the rest on your **focus debt**. When a debt is paid off, its minimum moves to the next one by itself. Once a month, update the balances from your statements and the plan is worked out again.

This is a planning tool and does not give financial advice. Each lender may charge interest a little differently. Made with the help of AI tools.
