

Inventory & Sales Tracker

Thanks for your order. Setting it up takes about ten minutes. After that you add one line each time your stock changes.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Inventory-Sales-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*.

Excel: double-click the file.

Setting it up

1. **Products:** one line per product. Give it a short code (SKU), then the name, a category, what one unit costs you, your price, how many you have today, and the stock level at which you want to reorder.
2. **Stock Moves:** from now on, one line each time stock changes. *Purchase* is stock you bought or made, *Sale* is an order, *Return* is an item sent back, and *Adjustment* is for broken, lost or gifted items (type a negative number).
3. The example products and stock moves are made up. Select the yellow cells and press Delete, rather than deleting whole rows.

Once a week

Open the Dashboard. **To reorder now** counts the products at or below their reorder level. On the Products tab they show in orange, or in red when sold out. Pick a month to see its sales, units and gross profit.
