

Job Application Tracker

Thanks for your order, and good luck with the search. Setting it up takes about five minutes. After that, a line for each job keeps everything up to date.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Job-Application-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. With the Google Sheets app you can add a job from your phone.

Excel: double-click the file.

Setting it up

1. **Settings:** how many applications a week you aim for, after how many days to follow up, and after how many days of silence a job counts as No reply.
2. Delete the example jobs, interviews and contacts: they are made up. Select the yellow cells and press Delete, rather than deleting whole rows.

As you go

- **Applications:** one line per job you save or apply for. Keep two things up to date: the stage, and the day of the last contact with them.
- **Next step:** a call, a task or a closing date, with its date. Without one, a follow-up date comes by itself from the last contact, and the Dashboard lists it.
- **Interviews:** each one with what to prepare and how it went. An x once the thank-you note is sent.
- **Contacts:** recruiters and people who can help, with the next time to get in touch.
- **Dashboard:** the pipeline, the next steps in date order, the interviews coming, and each week against your goal.

Good to know

- Replies counts every job that moved past Applied, a rejection included: it shows how often your applications get an answer.
- Rejected and withdrawn jobs stay on the list in grey, so the numbers stay honest.
- Room for 300 jobs, 200 interviews and 200 contacts.
