

Personal Loan Tracker

Thanks for your order. Setting it up takes about ten minutes: your name, then each loan once. After that, a line for each payment.

Opening the file

Google Sheets: at drive.google.com, click *New > File upload*, pick **Personal-Loan-Tracker.xlsx**, open it and choose *File > Save as Google Sheets*. **Excel:** double-click the file.

Setting it up

1. **Settings:** your name for the statements, the currency, and how many days before a payment it shows as Due soon.
2. **Loans:** each loan once, lent or borrowed, with its date and amount. For a plan, add the number of payments, how often (every week, 2 weeks or month) and the first payment date. Leave the plan empty for a loan paid back whenever it suits.
3. Delete the example people, loans and payments: they are made up. Select the yellow cells and press Delete, rather than deleting whole rows.

As money comes in and goes out

- **Payments:** the date, the loan (pick it by its number and name), the amount and how it was paid.
- **Loans:** what is still to pay, the next payment and the status: On track, Due soon, Overdue, Open or Paid off.
- **Statement:** pick a loan to print or share it, with a message at the bottom you can copy and send.

Good to know

- Interest is simple: so much a year on the amount of the loan, over the time of the plan. With no plan, it runs from the date of the loan to today.
- A plan splits the total into equal payments. The last one takes the odd cents.
- A payment counts as overdue from the day after its date.
- Room for 300 loans and 800 payments.
