

Student Planner and Grade Tracker

Thanks for your order. Setting it up takes about twenty minutes at the start of a term, most of it typing in the due dates from your course outlines.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Student-Planner.xlsx**. Open it, then choose *File > Save as Google Sheets*. The Google Sheets app then shows what is due on your phone.

Excel: double-click the file.

Setting it up

1. **Settings:** the kinds of work your courses grade (homework, quizzes and so on), your school's grade scale from low to high, and how many hours a week you want to study.
2. **Courses:** each course with its credits and how much each kind of work counts, from the course outline. The weights of a course should add up to 100%. Add the grade you are aiming for.
3. **Assignments:** every assignment, quiz and exam with its course, kind and due date.
4. **Timetable:** type a course in each hour you have class.

You only type in the **yellow cells**. Delete the example term before you start. Select the yellow cells and press Delete, rather than deleting whole rows.

During the term

When you hand something in, set its status to Done. When you get it back, type the score and what it was out of. Log your study time on the Study log tab. The Dashboard shows what is due next and what is late, your grade and letter in each course, the score you need on the final to reach your target, your GPA and your study hours by week.

The grade in a course counts only the kinds of work that already have scores. The score needed on the final assumes the rest of your grade stays as it is.

Grades are estimates from the weights you type. Your school's own records always come first. Made with the help of AI tools.
