

Software and Tools Tracker

Thanks for your order. Setting it up takes about twenty minutes, most of it finding the renewal dates. After that it keeps itself up to date: the next charge moves on after each renewal.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Software-Tools-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. Share it with whoever looks after the tools.

Excel: double-click the file.

Setting it up

1. **Settings:** the currency, how many days before a yearly charge you want a warning, and the categories.
2. **Cards:** each card or account the tools are paid with, and the last day of the month it expires. Only a name you recognise, such as Business card A: never the card number.
3. **Team:** everyone who uses the tools. The example business is made up, so delete it first.
4. **Tools:** each tool with its billing, price and card, and the date of a renewal. Any past renewal date works: the next charge is worked out from it. For a plan paid per seat, an x under Per seat and the number of seats.
5. **Access:** one line per person and tool. The seats used come from here.

As you go

- **A new tool or a new person:** add a line on Tools or Team, and the lines on Access.
- **Someone leaves:** type the day on Team. The Dashboard lists each tool to remove them from. Once done, type the day under Removed on, and the seat stops counting.
- **Cancelling:** type the day it ends under Cancelled on. It stays on the list, marked Cancelled.
- **Notice:** if a plan must be cancelled some days before it renews, type the days. The status then gives the last day to cancel.
- **A new card:** add it on Cards and pick it for each tool. A card that runs out before a charge is flagged.

Keep passwords out of this file: a password manager is the place for them. Room for 100 tools, 100 people, 400 access lines and 20 cards. Made with the help of AI tools.
