

Baby Log

Thanks for your order, and congratulations. Setting it up takes two minutes. After that, one line for each feed, sleep or change is all it asks.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Baby-Log.xlsx**. Open it, then choose *File > Save as Google Sheets*. With the Google Sheets app you can add a feed from your phone in the middle of the night, and share the file with your partner.

Excel: double-click the file.

Setting it up

1. **Settings:** the baby's name and birthday, and your units: ml or oz, kg or lb, cm or inches.
2. The example baby is made up: delete her lines on Feeds, Sleep, Nappies, Growth, Appointments and Milestones.

Every day

- **Feeds:** the date and time, breast or bottle, and the minutes or the amount.
- **Sleep:** when the baby fell asleep and woke up. A sleep past midnight counts on the day it started.
- **Nappies:** the date and time, with an x under Wet, Dirty or both.
- **Dashboard:** today, or any day you type in, with the last feed and how long ago, and the seven days before.

Now and then

- **Growth:** each time the baby is weighed or measured. The age and the weight chart follow.
- **Appointments:** checks and vaccines as they are booked. The next one shows on the Dashboard.
- **Milestones:** type the date of each first, and the age fills in.

This is a log and it does not give medical advice. For any question about feeding, sleep or growth, ask your midwife, health visitor or doctor. Made with the help of AI tools.
