

Debt Payoff Planner

Thanks for your order. Filling it in takes about three minutes, and then you see your debt-free date.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Debt-Payoff-Planner.xlsx**. Open it, then choose *File > Save as Google Sheets*.

Excel: double-click the file, and click "Enable editing" if Excel asks.

Setting it up (Debts tab)

1. One line per debt: the current balance, the yearly interest rate (%) and the minimum monthly payment.
2. The extra amount you can pay each month on top of the minimums. Even a small amount moves the date.
3. The month of your first payment.
4. The method: **Avalanche** pays the least interest, **Snowball** clears the smallest debts first.

Each month

The Dashboard says what to pay: the minimum on every debt, and the rest on your **focus debt**. When a debt is paid off, its minimum moves to the next one by itself. Once a month, update the balances from your statements and the plan is worked out again.

This is a planning tool and does not give financial advice. Each lender may charge interest a little differently. Made with the help of AI tools.
