

Car Maintenance Tracker

Thanks for your order. Setting it up takes about fifteen minutes. After that, a line for each fill-up and each cost keeps everything up to date.

Opening the file

Google Sheets: go to drive.google.com, click *New > File upload* and pick **Car-Maintenance-Tracker.xlsx**. Open it, then choose *File > Save as Google Sheets*. With the Google Sheets app you can add a fill-up at the pump.

Excel: double-click the file.

Setting it up

1. **Settings:** km or miles, litres or gallons, and how early you want a warning.
2. **Cars:** the example cars are made up, so delete them and add yours, up to five, with the odometer on the day you start and that date.
3. **Services:** what each car needs, every so far or every so many months, and the odometer and date it was last done. The handbook or your garage has the intervals.
4. **Documents:** insurance, tax, inspection and the rest, with the day each one ends.

As you drive

- **Fuel:** one line per fill-up with the odometer, the amount and what you paid. Put an x under Full when you fill the tank. The consumption is worked out from one full tank to the next.
- **Costs:** every other cost. The odometer is optional.
- **Services:** when a service is done, change its last odometer and date.
- **Dashboard:** each car's odometer, consumption and cost, what is due, and the year month by month.

The day a service is due by distance is an estimate from how far the car has gone each day since the start. Made with the help of AI tools.
